- ▶ Fully Managed

Protect your brand & customers

Identify malicious use of your brand before any victim is made. Our countermeasures will inhibit and arrest malicious activity, saving your brand reputation and protecting its value.

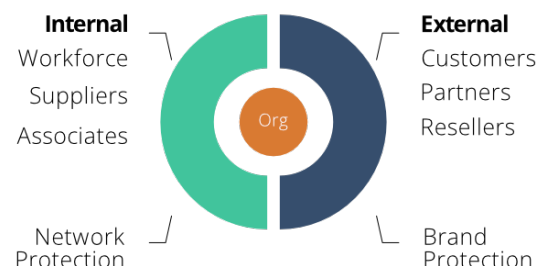

Fastest identification of brand attacks, be the first to know, and the first to act.

It is so easy to register a malformed domain to target your customers. PreCrime technology give you speed of action to avoid victims.

Customers are your most valuable asset, protect them to protect your brand.

73% of customers hit by an attack changed or considered changing to a competitor product/ service.

Zenbu New paradigm in company security

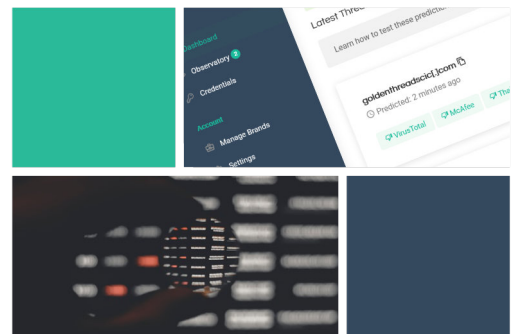

We deploy countermeasures to limit traffic, up to full takedown.

Don't waste time collecting proof and manually chasing registrars. Let us do the paperwork and proactively disable malicious actors.

Fully Managed , no integration required - we take care end to end.

Tell us the brands and domain to keep safe and how do you want to receive alerts, and the service is up in minutes.

False Positives on Alerts

Use Case

Enhancing Customer Cybersecurity

Problem

Preventing customers getting scamed trough spoofed versions of your online channels is impossible.

Solution

PreCrime Brand detects and alerts the existance of brand intrusions of phishing or malware distribution. Add PreEmpt Active Defense to securely neutralized any attack before it even starts.

Use Case

Getting there so fast as predictive

Problem

Managing thousands of alerts in real-time across big organizations is resource consuming.

Solution

PreCrime Brand patented technology will detect only true malicious spoof entities faster than other comparable solutions. Ultra low false positives and multiple integrations makes automation it's best friend.
