

## Predictive Threat Intelligence for Agencies

# PreCrime™ Public Sector Defense

PreCrime™ Public Sector Defense provides departments, agencies, and organizations behind-the-door cybersecurity intel and 24/7/365 protection for key personnel, critical systems and networks, and near real-time remediation of threat vectors. The fastest and most accurate predictive and preemptive cybersecurity solution for stopping cyber attacks before they launch.

**<7 minutes**

prediction to disruption

**<24 hours**

avg time of takedown

**100%**

automated

## See and Stop what is Over the Horizon

Using predictive technology to identify external attacks before they happen, BforeAI provides the intelligence, disruption, and takedowns to keep your users safe.

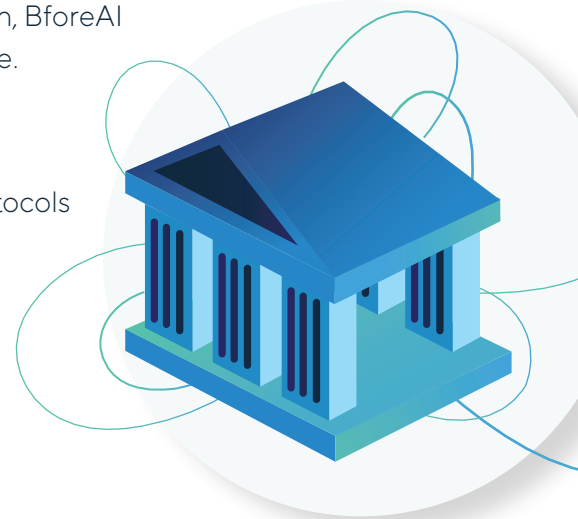

### BforeAI Public Sector Defense provides:

- ✓ Predictive Threat Intelligence via common threat intelligence feed protocols
- ✓ 24/7/365 cyber defense solution
- ✓ No instrumentation or data ingestion onboarding
- ✓ Augments existing C&ISR critical technology stacks
- ✓ 18 days advance identification of malicious attack vectors

## Intelligence, Surveillance, and Reconnaissance

Government agencies and national defense forces face enormous challenges in protecting critical systems, sensitive data, and personnel from increasingly sophisticated cyber threats. These threats, originating from both external and internal sources, include targeted attacks, malware, phishing campaigns, and disinformation operations. High-profile targets such as senior leadership, government employees, war fighters, allies and third-party contractors are frequently

targeted, with attacks often designed to exploit vulnerabilities in networks, applications, or human behavior. The resulting breaches and disruptions can be incredibly costly, impacting national security, operational effectiveness, and public trust.

*Each and every one of these threat blocking events saves a user from being harmed.*

– **Danielle Deibler**, Director of Threat Intelligence for Quad9

## About BforeAI

BforeAI is a pioneer in Predictive Attack Intelligence and Digital Risk Protection Services (DRPS). Using predictive AI, we offer the fastest, most accurate automated solution to stop malicious infrastructure attacks weeks before they happen.

Our autonomous PreCrime platform predicts, blocks, and preempts malicious campaigns before they impact your business. This evolutionary learning technology is constantly improving anomaly identification, while reducing false positives to 0.05%, enabling organizations to stop attacks in minutes.
